

Exam: Research Design: Basics

Multiple Choice (Single Select) - 4 Answer Options

1. What is the first element of an empirical study?

- A) The research question
- B) The sample
- C) The method
- D) The literature review

2. What distinguishes exploratory from confirmatory research?

- A) Exploratory is better
- B) There is no difference
- C) Exploratory generates hypotheses, confirmatory tests them
- D) Confirmatory is qualitative

3. What is a cross-sectional design?

- A) Data at multiple time points
- B) Data at one point in time
- C) A qualitative study
- D) An experimental study

4. What does internal validity mean?

- A) Results are generalizable
- B) The instrument measures reliably
- C) The study actually measures the causal effect
- D) The sample is large

5. What does external validity mean?

- A) Results are generalizable
- B) The theory is confirmed
- C) Measurement is reliable
- D) The causal effect is secured

6. Which design is best for causal claims?

- A) Experiment
- B) Qualitative interview
- C) Literature review
- D) Cross-sectional survey

7. What is a confounder?

- A) A missing value
- B) A measurement error
- C) An outlier
- D) A third variable that distorts the relationship

8. What is the main disadvantage of longitudinal studies?

- A) Expensive and dropout (participant attrition)
- B) No causal claims
- C) Only qualitative data
- D) Low validity

Solutions

1: A

2: C

3: B

4: C

5: A

6: A

7: D

8: A
