

Exam: Measurement Theory and Operationalization

Multiple Choice (Single Select) - 4 Answer Options

1. What does operationalization mean?

- A) Theory building
- B) Translating a construct into measurable indicators
- C) Statistical analysis
- D) Sampling

2. Which scale level allows all arithmetic operations?

- A) Ordinal scale
- B) Interval scale
- C) Ratio scale
- D) Nominal scale

3. What does Cronbach's alpha measure?

- A) Internal consistency (reliability)
- B) Validity
- C) Effect size
- D) Correlation

4. Which alpha value is considered acceptable?

- A) > 0.7
- B) > 0.5
- C) > 0.9
- D) > 1.0

5. What does validity mean?

- A) Does the instrument measure what it intends to measure?
- B) Is the sample representative?
- C) Is the test objective?
- D) Is the measurement precise?

6. What is the difference between reliability and validity?

- A) There is no difference
- B) Validity is a prerequisite for reliability
- C) Reliability = precision, validity = accuracy
- D) Reliability is more important

7. What is a Likert scale?

- A) A visual analog scale
- B) A dichotomous scale
- C) A nominal scale
- D) A multi-level agreement scale (1-5)

8. What does objectivity mean?

- A) Sample is representative
- B) Results are independent of the test administrator
- C) Measurement is precise
- D) Theory is correct

Solutions

1: B

2: C

3: A

4: A

5: A

6: C

7: D

8: B
